

Portable Pilot Plug

Connects you on the bridge

Bluetooth Pilot Plug Interface

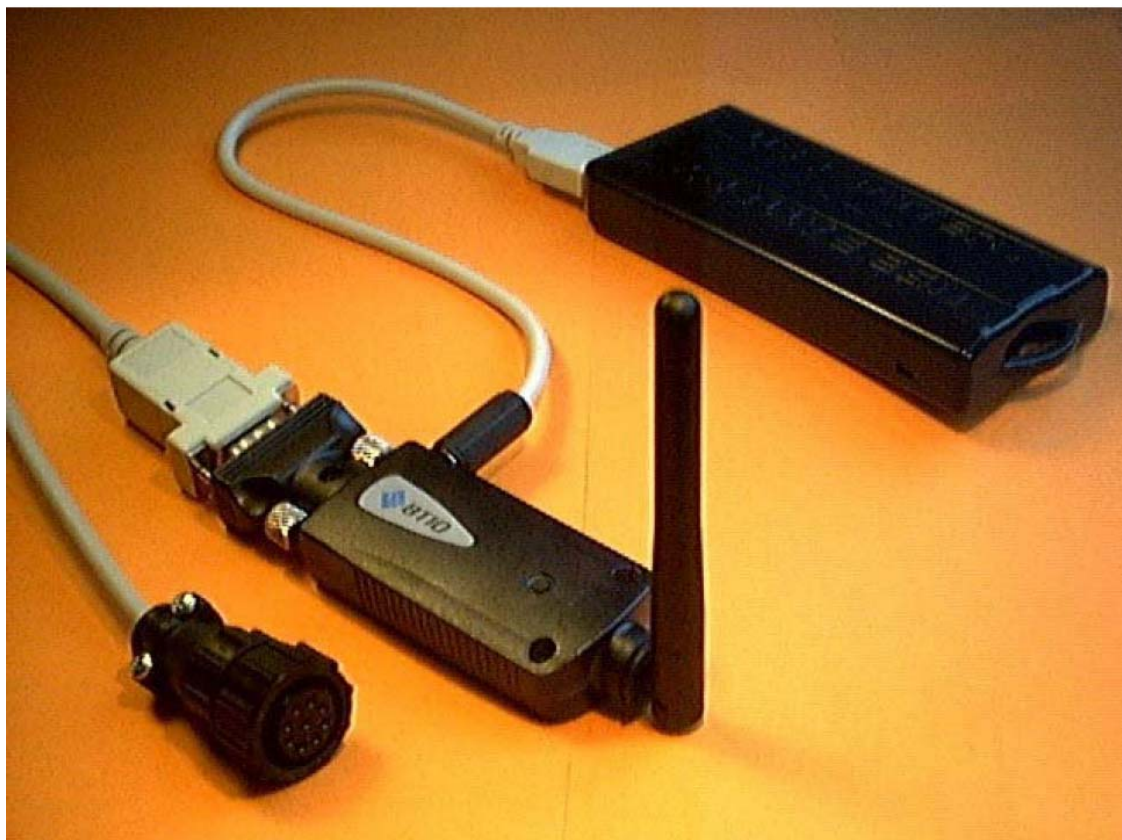

- Bluetooth Class 1 device with 100 m nominal range
- Low power consumption with 15-18 h operational time
- Battery pack rechargeable with charger (220V) or via USB-Port
- Fully compatible with AIS Pilot Plug
- Wireless design ensure optical isolation and surge protection
- Light weight: less than 300 g including battery and cables.
- The pilots PC must be equipped with a Bluetooth Class 1 Adapter (not supplied)

The Pilot Plug is mandatory (and standardized by IMO) on every SOLAS vessel over 500 GRT and is an easy way to connect a mobile PC to the on-board AIS system. With our battery-powered pilot plug a pilot can easily access the own-ships data as well as data of all other AIS vessels and objects.

On many ships unfortunately the AIS Pilot Plug is not mounted where it is supposed to be installed according to the IMO installation requirements (the conning position).

The solution to this is our wireless pilot plug. Just connect it to the AIS Pilot Plug (wherever it is) and have the AIS data transmitted to your mobile PC. The pilot plug comes with a rechargeable battery for 15 to 18 hours of use and transmits as far as 100 meters (Bluetooth Class 1). The modular design of the Bluetooth adapter and battery pack allows the use of a second battery pack to enhance operational time.
